Interfaces and controls

OVERVIEW LED COLOR AND BLINK CODES

Power LED

Description

- Start up device
- Normal operation
- Configuration mode is aktive

Uplink LED

Description

- SERA switched off
- SERA connecting
- SERA standby mode
- SERA connected (normal operation)

Status LED

Description

- Normal operation
- No connection to the local Network
- Can't obtain an IP address
- Default gateway is unreachable
- DNS Server is unreachable
- No connection to HOOC Cloud

Possible cause of error

- The network cable is not plugged in or there is no device (e.g. switch) at the other end of the network cable.
- Network cable defective
- There is no DHCP server in the network segment of the HOOC Connect.
- There is no default gateway (router) in the network segment of the HOOC Connect.
- Default gateway blocks ICMP requests.
- The DNS server used is not configured correctly.
- The DNS server (local or provider's) cannot be reached.
- If the provider's DNS server is used, the firewall may block access (e.g. 8.8.8.8 - google).
- There is no internet connection.
- Port 443 (outgoing) may be blocked by the firewall.
- You may be using a web proxy. The connection to the HOOC Cloud does not work behind a Webproxy.

RESET-BUTTON

 1 Sek.	Enable configuration mode
 5 Sek.	Restart gateway
 15 Sek.	Reset to factory settings

Configuration

The parameterization of the HOOC Gateways (series H) **from firmware 2.x.x** can be done via browser.

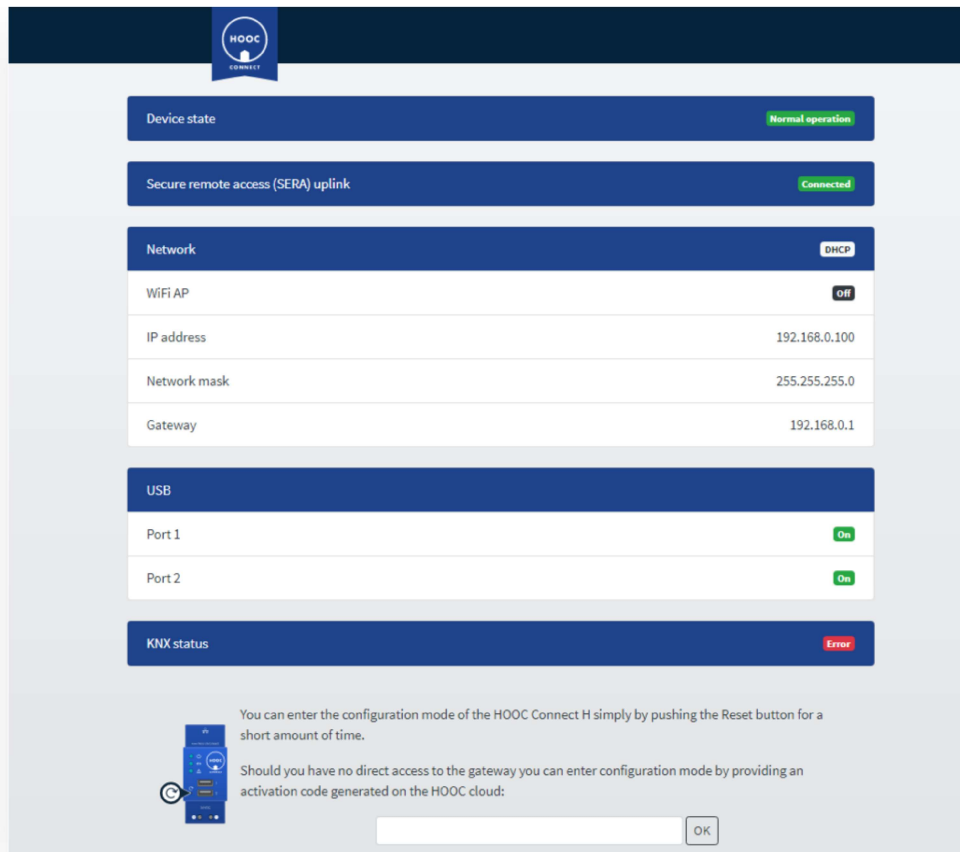

Info

The device obtains an IP address via DHCP in the factory settings. In addition, the HOOC Gateway is configured with a static IP address **172.17.17.17**.

Establish connection to the HOOC Gateway

Follow the instructions below to connect (your PC) to the HOOC Gateway:

1. Connect the HOOC Gateway to the power supply
2. Wait until the device has started up (approx. 1min)
3. Connect your PC to the network port of the HOOC Gateway, or to the switch to which the HOOC Gateway is connected to.
4. Set your network adapter to the IP address 172.17.17.16 with the subnet mask 255.255.255.0
5. In your browser (preferably *Google Chrome*) open the URL 172.17.17.17

Configuration mode

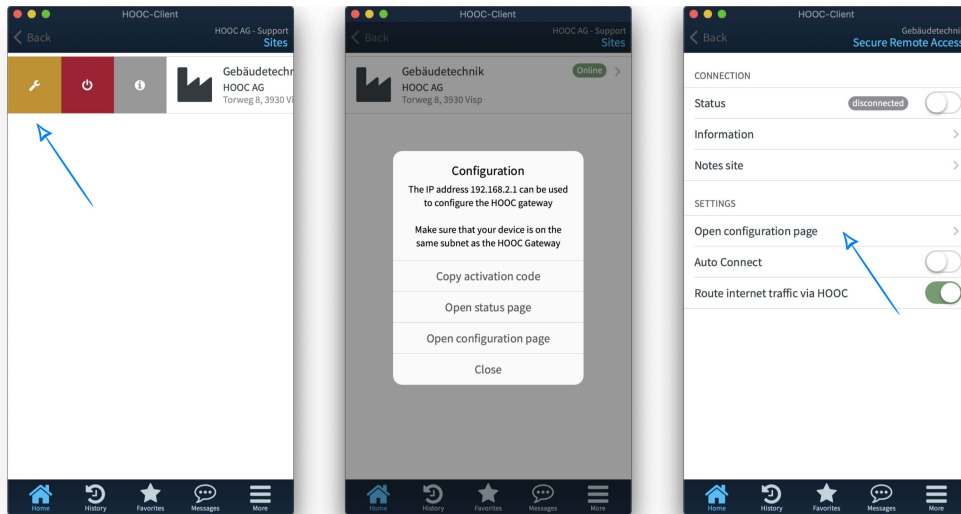

Enter configuration mode

Local

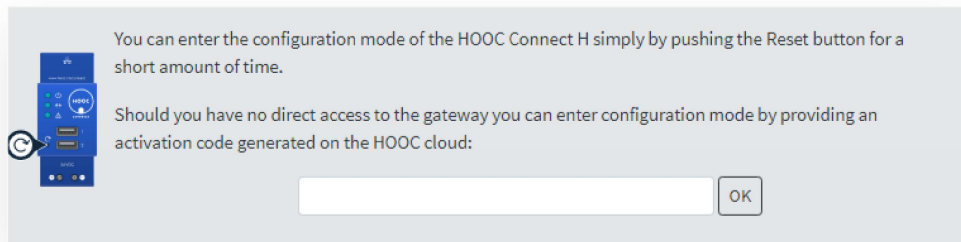

The configuration mode can be activated by pressing the reset button briefly (1 sec).

from Remote

The configuration mode can be activated remotely with the HOOC App. The activation code of a HOOC Gateway can be generated either in the sites overview or in the menu "Secure Remote Access".

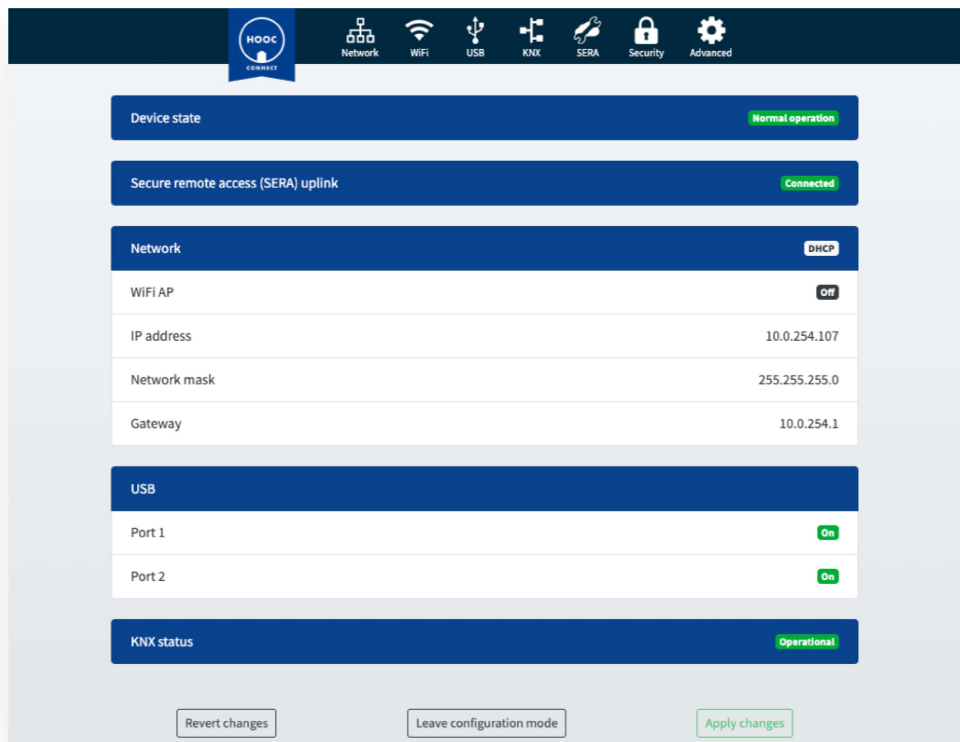

The generated code can now be used to activate the configuration mode.

Info

If the configuration mode is active, the power LED (red) lights up continuously.

Exit configuration mode

The configuration mode can be deactivated by pressing the **Leave configuration mode** item, or it automatically deactivates 30 seconds after disconnecting from the configuration page.

Info

If the configuration mode is inactive, the power LED flashes white.

Apply configuration

Once the new settings have been made, they can be transferred to the HOOC Gateway by clicking on the **Apply changes** element.

Configuration network port

HOOC CONNECT

Network WiFi USB KNX SERA Security Advanced

Retrieve IP configuration using DHCP

IP address 10.0.254.107

Network mask 255.255.255.0

Gateway 10.0.254.1

DNS servers 10.0.254.1

Revert changes Leave configuration mode Apply changes

The device obtains an IP address via DHCP. If required, this IP address can be defined statically.

Configuration WiFi

HOOC CONNECT

Network WiFi USB KNX SERA Security Advanced

WiFi AP off

WiFi enabled

SSID hooc-1a8a

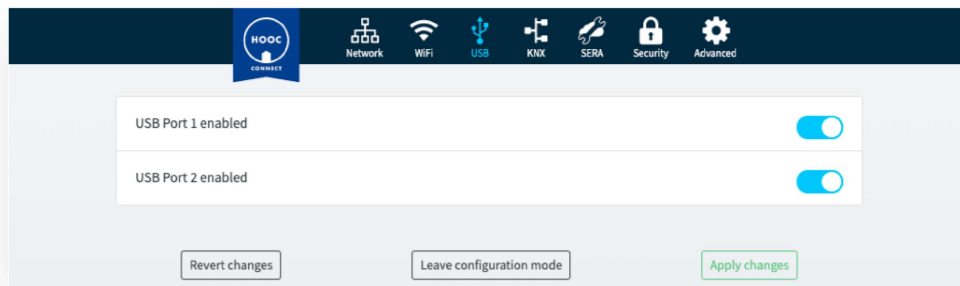

Password

Channel Automatic

Revert changes Leave configuration mode Apply changes

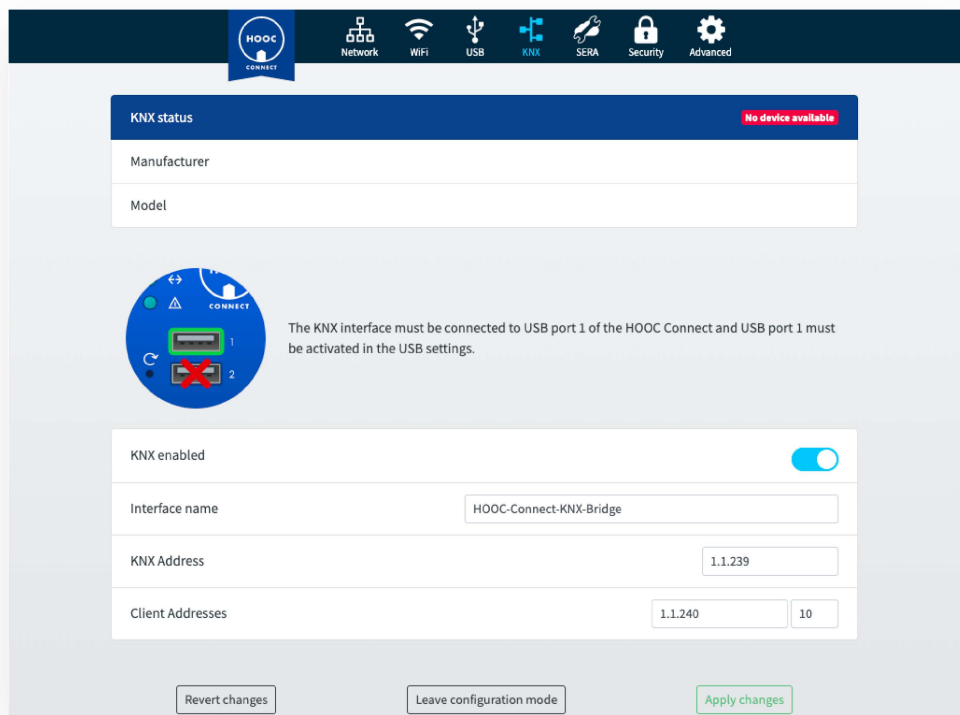

The WiFi can be used as an access point for the LAN network. The **password** corresponds to the **serial number** of the gateway by default and is **switched off**.

Configuration USB

The power supply of the USB interfaces is switched on at delivery.

Configuration KNX

HOOC offers the possibility of converting data from a KNX USB interface into data from a KNX IP gateway or KNX IP router. Thus a KNX USB interface can also be used as a “terminal device” in the *Secure Remote Control* service via HOOC Connect. The following settings can be made:

Setting	Description
KNX enabled	Enables/disables KNX functionality

Setting	Description
Interface Name	Name of the interface (displayed in the ETS)
KNX Address	KNX source address of the HOOC Connect to be used
Client Addresses	KNX start source address to be used for packets and number of parallel connections for (KNX IP tunneling)

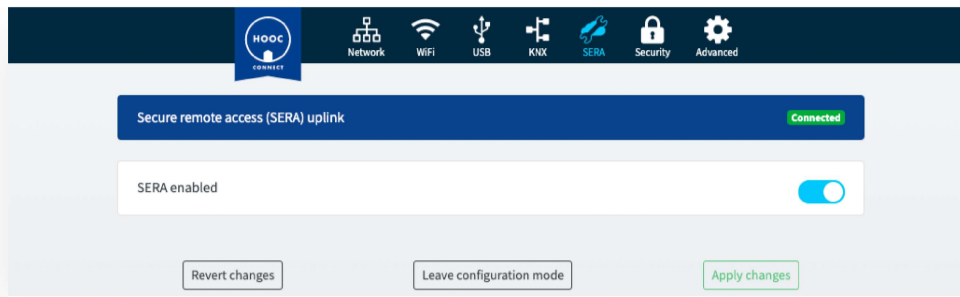

The source addresses 1.1.240 to 1.1.249 are used for the setting 1.1.240 and 10 Client Address.

A commercially available KNX USB interface can be connected to USB port 1. The connection status of the KNX USB interface is displayed directly including information about the manufacturer and the model. The list below gives an overview of supported and ETS tested types.

KNX USB Interface	USB Vendor ID	USB Product ID	tested (ETS)
Siemens KNX/EIB-USB Interface (Flush mounted)	0e77	0111

SERA Settings

SERA can be activated or deactivated here.

Warning

Deactivating will prevent the HOOC Gateway to connect to the HOOC Cloud and the services of HOOC will no longer be usable.

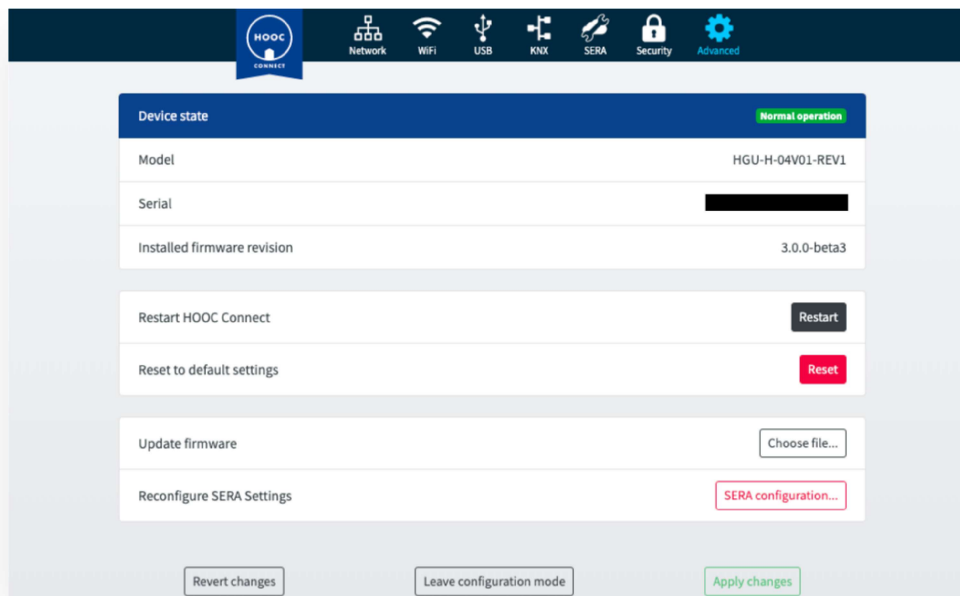

Security Settings

When deactivating the setting *“Allow enter config mode by pressing reset button”*, the configuration mode cannot be more can be activated with the reset button **(local)**. The activation of the configuration mode can only be done with an activation code take place. Thus, persons without access authorization to the *site* cannot reconfigure the device.

Advanced Settings

The advanced settings shows the device status and the device information.

Restart HOOC Connect

The device can be rebooted by clicking on the **Restart** element without interrupting the power supply.

Reset to default settings

Clicking on the **Reset** element resets the device to the factory settings.

Firmware update

HOOC recommends regular updates of the firmware. The firmware can be downloaded from the [HOOC Management Portal](#) at the corresponding site under the menu **HOOC Gateway -> Configuration**.

Warning

Follow the instructions in the configuration tool and **make sure that the power is not interrupted during the upgrade process!**
